**Don't Let  
Mosquitos**

**Keep You  
Indoors**

**Automatic Mosquito  
Misting Systems**

The CoastalMister System is installed around the perimeter of your home and yard to **protect** you and your family from annoying bug bites.

Each system is custom designed and installed to fit your property with a low profile nozzle circuit **blending in seamlessly** to any outdoor space.

# Mosquito Misting Protocol

- CoastalMister systems are programmed to mist when mosquitos are active.
- The misting cycle lasts for 30 - 60 seconds, and occurs 2-4 times each day.
- Any mosquitos that are present during these times are hit with a lethal dose, while a repelling effect remains for hours.

# Misting Chemicals

The CoastalMister System works with a variety of formulated concentrates, including eco-friendly green products.

These products are diluted to a rate of less than 1% active ingredient when mixed with water into the 55 gallon tank.

Consult with your local dealer to find the product that suits your needs.

# Installation Process

- Customer interview and thorough site inspection to determine the layout of the misting system.
- Installation of the control unit, tubing, and nozzles.
- Testing of the mist pattern to ensure adequate coverage.
- Training the customer on how to operate the system effectively.
- Monthly or quarterly service and refilling of the tank.

Only a licensed professional is qualified to maintain your system. Always seek professional assistance for your pest control needs.

Since its inception in 2002, the CoastalMister system remains the most versatile and dependable insect misting system available.
